

# **MINI PROJECT**

## **TITLE:**

**COUNTRY DATABASE MANAGEMENT SYSTEM**

(Using Netbeans and Oracle 11g)

## **TEAM MEMBERS:**

**C.ADITHYA NATARAJAN (185001008)**

**M.ASWIN (185001027)**

**S.BALAJI (185001032)**

## **COUNTRY DATABASE MANAGEMENT SYSTEM:**

It will maintain a data set about the country which is very useful to government for implementing schemes, analysis requirements, predicting future of country in terms of resource required, population.

## **COMPONENTS:**

To make the system more reliable and ease to use, we split our system into three modules

1-CITIZEN

2-GOVERNMENT OFFICAL

3-VISITOR

# **OBSERVATION:**

1=>citizen point of view :-

As our country is open democratic, citizen can view how government managing things like

- + what are all the supplies entering into the country
- + how they are distributed to different states
- + what is the current population of the country
- + every state's information
- + and citizen can do basic analysis.

2=> Government official point of view :-

Government official should use their login id and password to enter the data manipulating center and a government official can do things like

- + Add new person, edit person (update, delete)
- + Add new state, edit state (update, delete)
- + Add new supply
- + Add new inventory
- + Add new visitor, edit visitor (update, delete)
- + Register (new child born, marriage, death)
- + Basic and advanced analysis.

3=>visitor point of view :-

Every visitor is hosted by a person and a visitor can view things like

- + Complete information about all states
- + Info (information about schools, tourism, colleges, hotels, hospitals etc...) .

4=>some other important useful things

## **1-Emergency**

It will have the record of all hospitals and police stations phone number by entering the state id any body can get the phone number

## 2-Help manager

It is an easy accessing module will help the to find what they need immediately .
